MaxTrak® (SLT)
Slotted Deflection Track for non-structural drywall framing

The ClarkDietrich MaxTrak® (SLT) system is a head-of-wall deflection track that is used for framing exterior curtain walls and non-load bearing interior walls. This system allows for vertical live load movement of the primary structure without transferring axial loads to the wall studs. The MaxTrak system is attached to the wall studs through vertical slots using waferhead screws creating a positive connection that allows for vertical movement and also eliminates the requirement for lateral bracing near the top of the wall stud.

The slots in the track’s legs are designed for a total allowable vertical movement of 1-1/2” (3/4” +/-). The MaxTrak system must be designed to take the end reaction of the wall studs (point loads) by using the allowable loads below.

Product Data & Ordering Information:
- Material: Grade 33ksi min. yield strength
- Coating: G40EQ for 30mil, CP60 for 33mil (G90 available)
- Thickness: 30mils: 20ga DW, 0.0312” Design Thickness, 0.0296” Min. Thickness
  33mils: 20ga, 0.0346” Design Thickness, 0.0329” Min. Thickness
- Dimensions: 2-1/2” legs with an inside depth equal to the depth of the stud
  Available in 2-1/2”, 3-5/8”, 4”, 6” and 8” wide systems
  Vertical slots are 0.22” wide x 1-1/2” long and spaced every 1” o.c.
- Track length: 10'-0”

ASTM & Code Standards:
- ASTM A1003, C645, C754, C955, C1002, C1007, E119, E814 and E1966
- Intertek CCRR-0205 - Only on 33mil System
- ANSI / UL 2079 and MaxTrak UL approved systems (See UL Fire Resistance Directory 42XE)
- SDS & Product Certification Information is available at www.clarkdietrich.com/SupportDocs

MaxTrak Allowable Loads with ProSTUD® Drywall Framing:

- Allowable loads are based on screws through the slots located 1-1/4” from the track web.
- #8 wafer head screws shall be used for stud-track connection.
- The above table is applicable to ProSTUD members only.
- ProSTUD allowable heights must be checked also.
- Allowable heights are based on 5psf and wall stud spacing at 16”o.c. with a max. gap of 7/8”.

For MaxTrak 2D maximum wall height charts, connection details, and fire rated assembly details on either of these systems, refer to www.clarkdietrich.com/MaxTrak.

Calculating slip track point load:
Point Load (P) = \((\text{wind pressure PSF}) \times (\text{spacing FT}) \times (\text{wall stud length FT}) / 2\)
Example 1: (5 PSF) x (1.33 FT) x (9.5 FT) / 2 = 31.7 lbs.
