MaxTrak® (SLT)  
Slotted Deflection Track for structural wall framing

The MaxTrak (SLT) system is a head-of-wall deflection track that is used for framing exterior curtain walls and non-load bearing interior walls. This system allows for vertical live load movement of the primary structure without transferring axial loads to the wall studs.

The MaxTrak system is attached to the wall studs through vertical slots using waferhead screws creating a positive connection that allows for vertical movement and also eliminates the requirement for lateral bracing near the top of the wall stud.

The slots in the track’s legs are designed for a total allowable vertical movement of 1-1/2” (3/4” +/-). The MaxTrak system must be designed to take the end reaction of the wall studs (point loads) by using the allowable loads below.

- The minimum wall stud thickness must be equal to the selected slotted track thickness.  
- #8 wafer head screws shall be used for 33 mil material sections. #10 wafer head screws for 43 mil and thicker sections.  
- MaxTrak allowable lateral loads are based on a maximum gap between the top of the stud and the web of the track of 7/8”.
