Deep Leg Deflection Track (Slip Track)

ProTRAK™ deep leg deflection track for interior walls

A single ProTRAK deep leg track system allows the top of the wall stud to float within the track legs. This connection allows for vertical live load movement of the primary structure without transferring axial loads to the wall studs. The deflection track system must be designed for the end reaction of the wall studs (point loads) and for the specific gap required for vertical deflection.

Product Data & Ordering Information:

Material:
- Yield Strength: 15mil and 18mil = 50ksi
- 30mil and 33mil = 33ksi
- Coating: G40EQ (G40 and G60 available)
- ProTRAK 25 (15mil): 0.0158" Design Thickness, 0.0150" Min. Thickness
- ProTRAK 20 (18mil): 0.0190" Design Thickness, 0.0181" Min. Thickness
- ProTRAK 30mil: 0.0312" Design Thickness, 0.0296" Min. Thickness
- ProTRAK 33mil: 0.0346" Design Thickness, 0.0329" Min. Thickness

Dimensions:
- 2", 2-1/2" or 3" legs with an inside depth equal to the depth of the stud.
- Standard depths available: 2-1/2", 3-5/8", 4", and 6".
- Custom depths available by special orders.

### Allowable Deflection Track Point Allowable Loads:

<table>
<thead>

<td>16'-11&quot;</td>
</tr>
</tbody>
</table>

Table Notes:
1. Limiting wall heights are based on studs spaced at 16" o.c. and an interior lateral load of 5psf.
2. Stud members must be analyzed independently of the track system. Use www.itools.clarkdietrich.com to check limiting wall heights of stud members.
3. Stud failure modes relating to the deflection track connection (shear, web crippling, etc.) must be checked separately.

ASTM & Code Standards:
- Drywall framing is produced to meet or exceed ASTM C645 & C754
- See ProTRAK Submittal for section properties
- Intertek CCRR-0207 - Evaluation Report
- SDS & Product Certification Information is available at www.clarkdietrich.com/SupportDocs
